***Reason for Allowance***

The prior art reference of records (US Pat. 6,480,067) fails to teach or fairly suggest a line driver for driving signals via at least one subscriber lines comprising a digital amplifier, an analog amplifier arranged in parallel with the digital amplifier and the outputs of the digital and the analog amplifier are superimposed, a feedback path, a matching circuit for matching the phase or the amplitude of the input signal to the output signal so that the overshoot on the digital signal is reduced after the superimposition as called for in claims 5, 10 and 23; line driver for driving signals via at least one subscriber lines comprising a digital amplifier, an analog amplifier arranged in parallel with the digital amplifier and the outputs of the digital and the analog amplifier are superimposed, a feedback path, a matching circuit for matching the phase or the amplitude of the input signal to the output signal so that the overshoot on the digital signal is reduced after the superimposition and a resistance network coupled to the output of the analog amplifier as called for in claim 6; a line driver for driving signals via at least one subscriber lines comprising a digital amplifier, an analog amplifier arranged in parallel with the digital amplifier and the outputs of the digital and the analog amplifier are superimposed, a feedback path, a matching circuit for matching the phase or the amplitude of the input signal to the output signal so that the overshoot on the digital signal is reduced after the superimposition, wherein the digital amplifier has a PWM characteristic as called for in claims 22 and 29.

***Conclusion***

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
